

Superstructure – radically constructive, thoroughly reimagined.

The modular Superstructure shelving system celebrates the contrast between raw steel, oak wood and shelves made of fibre cement, which looks like concrete. The unusual material plays a central role in this design by Martin Bereuter and Klemens Grund.
Three types of shelf lengths allow you to adapt the system to suit various spaces and needs. It can also be supplemented with closed cupboard elements. The Superstructure shelving system was honoured with a commendation at the 2018 Handwerk+Form competition.
For those who favour the warmth and natural aroma of wood over fibre cement, Superpine offers a compelling alternative.
Price examples:
Bookshelf: 190 x 180 cm, 15 shelves €3,430.00
Sideboard: 190 x 74 cm, 4 shelves, with solid oak cabinet with 2 compartments €2,980.00
Shelving unit: 250 x 145 cm, 10 shelves, with solid oak cabinet with 2 compartments €4,250.00

Design: Martin Bereuter, Klemens Grund
Year: 2018
Material: fibre cement, raw steel, MDF oak veneer
Manufacturer: Tischlerei Bereuter
Production partner: Waldmetall
Photography: Adolf Bereuter
